Introduction

In recent times, hackathons have become the major source of creativity, learning of new skills, and professional connections. HackSynk is a unique digital platform that unites the different stakeholders of any hackathon organizers, participants, and judges within a single, orderly environment. It is the platform's vision to convert the hackathon into a smooth journey from the initial team building to the last announcing of winners the manual fragmented process is replacing with technical intervention. We aim that the event is highly efficient and the user experience delightfully tops for each participant.

Problem Statement

Students and tech enthusiasts have to deal with several daily hardships that keep them from enjoying hackathons:

Disordered Team Formation:

- 01 Many of the participants find it hard to team up with the right ones having the needed skills thus leading to the formation of poorly coordinated groups.

Split Communication:

- 02 Having to use several outsiders' apps to communicate with the teammates or the event's staff causes the loss of vital information and the creation of waiting periods.

Complicated Management and Judging:

- 03 The event organizers frequently get bogged down with monitoring registrations using excel sheets, while the judges cannot access and score the projects in a just manner since there is no centralized and transparent system.

Solution

A comprehensive system will be designed to address the challenges faced by hackathon participants, organizers, and judges. It will be divided into three main components:

01

Team Formation

In order to ensure equitable and productive teamwork, the platform enables users to build or join teams according to their interests and skill sets.

02

Project Management

Through an organized online system, teams can submit their projects with complete documentation, and organizers can effectively oversee hackathon activities and track submissions.

03

Judging and Evaluation

Judges use a structured scoring system with clear criteria for evaluating projects. The system ensures transparency in rankings and winner announcements by automatically calculating results.

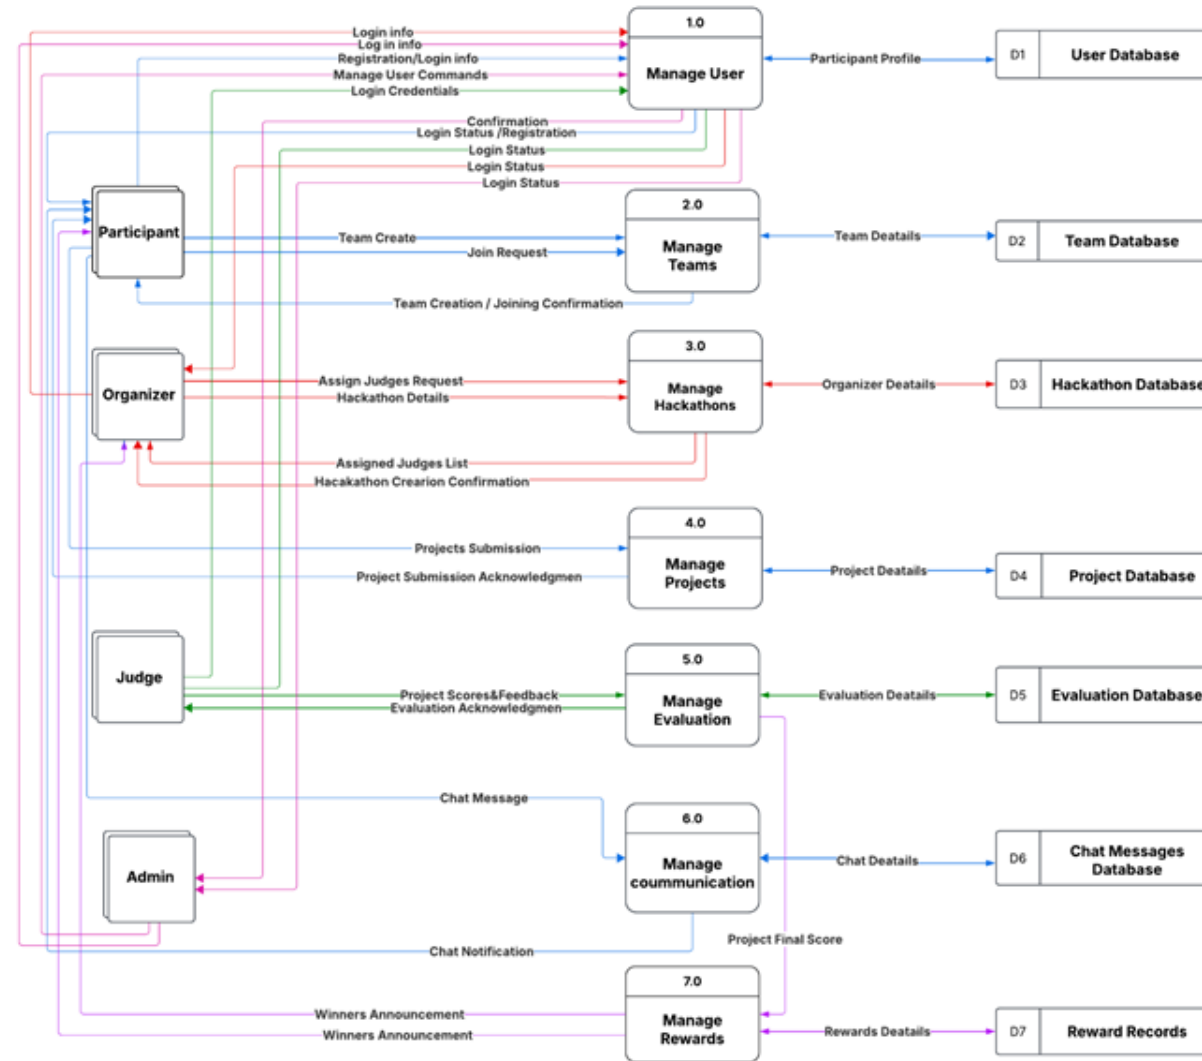

Project Scope

The HackSynk platform is designed to:

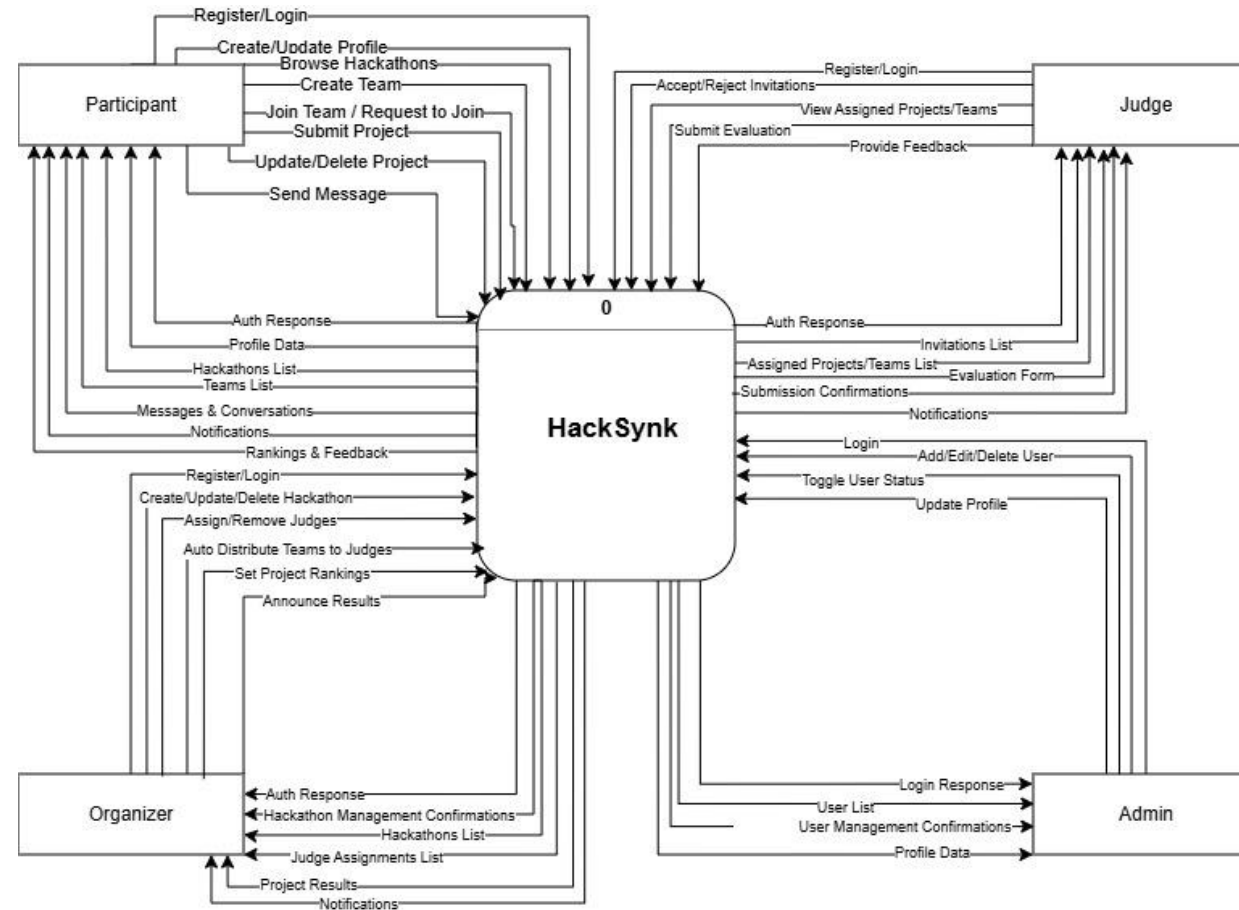

- Help participants form suitable teams easily
- Support organizers in managing hackathons digitally
- Enable fair and structured project evaluation by judges

Once launched, the system will be accessible to all hackathon stakeholders, providing a centralized and efficient hackathon management experience

Implementation

Next, we will briefly present the HackSynk website

Conclusion

This brings us to the end of our HackSynk journey

Thank you for your time and attention

We hope our project gave you a clear and meaningful experience
